

## HOW TO CONFIGURE POP3 EMAILACCOUNT ON IPHONE MOBILE STEP-BY-STEP GUIDE

**Step 1:** Go to “**Settings**” on your **iphone mobile** phone as shown below and click on “**Accounts**”

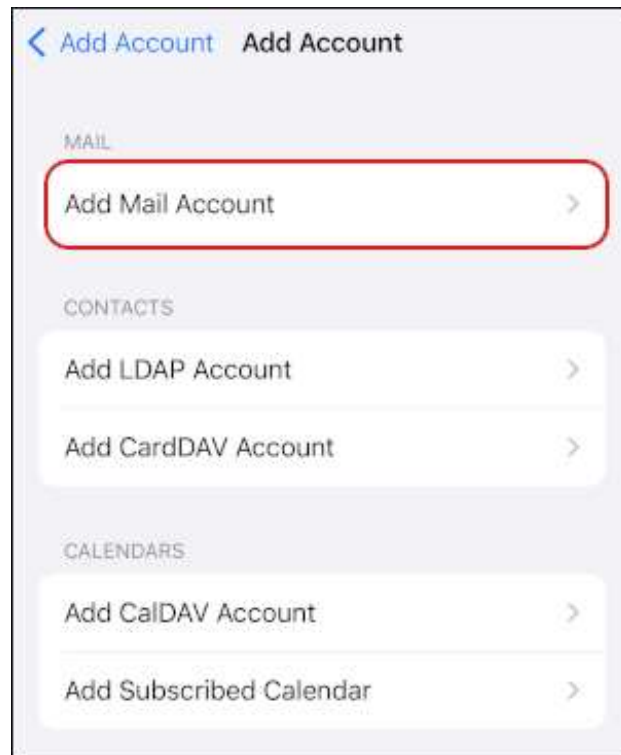

**Step 2:** The following window will appear. Click on “**+Add Account**” button. Make **sure Auto sync data** button is **ON**

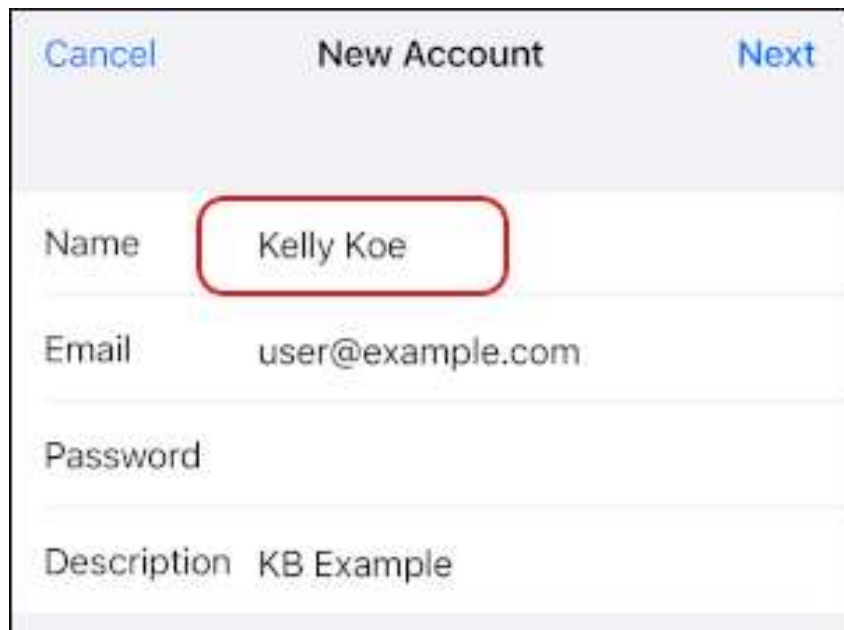

**Step 3:** The following window appears. Tap on **“Other”**

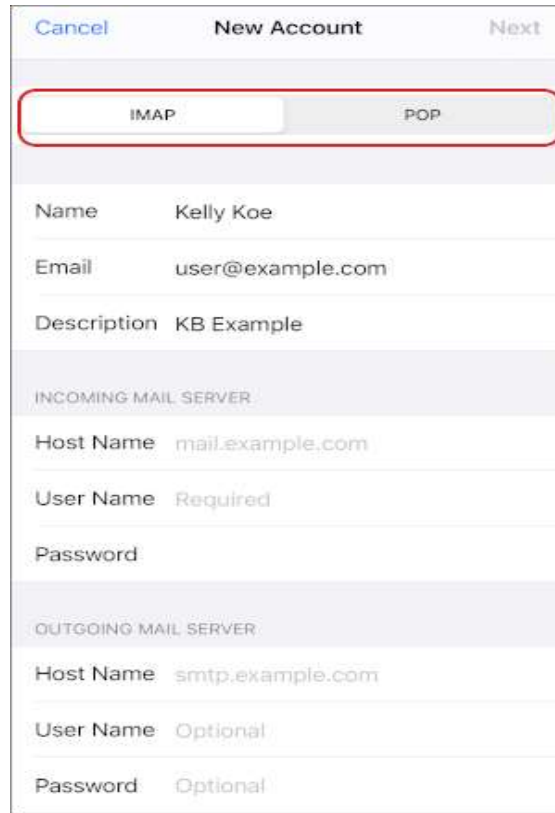

**Step 4:** Under **Mail**, tap “Add Mail Account”

**Step 5:** In the **Name** text box, type the display name that you want to appear on messages you send. In the **Email** text box, type the e-mail address of the account that you created in cPanel (for example, [user@example.com](mailto:user@example.com)) and **Password** given by your administrator and then Tap “Next”

**Step 6:** Select **POP** Account type of **incoming and outgoing mail server** that you want to use i.e. “**mail.yourdomainname.com**”. In the **User Name** text box, type the e-mail address (**for example, user@example.com**) of the account that you created in cPanel

**Step 7:** Tap Next. iOS verifies the mail server settings. This process may take several minutes. Confirm that **Mail** is set to **ON**, and then tap Save as shown below

**CONGRATULATION YOU ARE DONE...!!!!**
